

1 Log-Entry

1.1 Search

ID	User	User Story
----	------	------------

2 Announcements

ID	User	User Story
1	Shifter	As a shifter, I want to view announcements
2	Run coördinator	As a run coördinator, I have to create Logbook entries that cover almost all the Systems(e.g. global announcements or minutes)

3 Dashboard

ID	User	User Story
1	User	As a user, I want to see in a dashboard the metadata associated with an LHC Fill so that I can have a global image of what happend during that LHC Fill.
2	User	As a user, I want to be able to customize dashboards so that I only see the fields relevant to me.
3	Administrator	As an Administrator, I want to have a dashboard that gives me log-entry related analytics so that I follow the evolution of the repository

4 Templates

ID	User	User Story
1	Shifter	As a shifter, I want to have templates that prefill most of my end-of-shift reports from the available metadata so that I don't need to fill in myself what the system already knows.

2	Shifter	As a shifter, I would like to have templates that automatically compile and format the data available in the system in order to write my end of shift report in a fast and uniform way. Currently in the ALICE logbook I don't like that I need to compile all the information myself and that not all shifters use the same structure.
3	Run coördinator	As a runcoördinator, I want shifters to use templates so that it is easier and faster to read them
4	Subsystem Run Coordinator	As a SRC, I would like to be able to create my own detector specific templates for example On-Call interventions. In this case, I can specify the relevant information which are required from the OnCall shifter for different kind of "standard" events.
